

## Ask the Expert

Question: Is there a difference between using fuel additives and having the fuel system professionally cleaned and is it really worth it?

Answer: There is a big difference between the over-the-counter products and the professional products used by Quick Change. The strength and chemical composition is a completely different formula. The over-the-counter products are primarily for maintaining the system as opposed to the professional ones that will actually remove deposit buildup and restore original performance sometimes increasing gas mileage by 10 to 15% depending on the condition of the injectors. Charges for this service can be as high as \$95 or more in some shops. In some cases the cost of having the fuel system cleaned will pay for itself in gas savings. Quick Change will offer coupons periodically and our cost is \$59.95. Check the coupons page on this site and watch for our coupons in the paper.
